ASOR Syrian Heritage Initiative (SHI): Planning for Safeguarding Heritage Sites in Syria

Michael D. Danti, Cheikhmous Ali, and Kurt W. Prescott

Heritage Timeline

November 2, 2014  
*Sotaliraq* published a story detailing efforts by the Iraqi Ministry of Tourism and Antiquities to halt various sales of antiquities on the international market stolen by Islamic State. Iraqi antiquities officials verified IS theft/looting was widespread at that antiquities sales were an important source of revenue for the organization.  

November 1, 2014  
DGAM posted a report on damage to the Artaban Tomb at the UNESCO World Heritage Site, Ancient City of Palmyra, SHI Incident Report SHI14-073.  

October 31, 2014  
APSA posted five photos of the Maarat al-Numan Museum, courtesy of Sieve Magazine [Al-Gherbal].

October 29, 2014  
APSA posted two videos and 37 photos of the illicit excavations at Tell Hizareen. SHI Incident Report SHI14-072.  

• DGAM posted a short report (along with two photos) on their website about the destruction of Sufi Shrines in the Aleppo countryside. SHI Incident Report SHI14-071.  

October 27, 2014  
DGAM posted a report on damage to the Ayn al-Arab [Kobani] area. SHI Incident Report SHI14-070.  

---

1 This report is based on research conducted by the “Syria Preservation Initiative: Planning for Safeguarding Heritage Sites in Syria.” Weekly reports reflect reporting from a variety of sources and may contain unverified material. As such, they should be treated as preliminary and subject to change.
Military and Political Context

During the reporting period², the primary theaters of military engagement and insurgent activity in Syria were:

1) Marea north of Aleppo, where rebel forces clashed with Islamic State;
2) Jobar area of Damascus, where SARG conducted new bombardments and alleged CW attacks against rebel forces;
3) JN and Jund al-Aqsa gained new territory in the Jebel Zawiua in southern Idlib Governorate. Syrian Revolutionary Front lost its last remaining stronghold in Deir Sunbul as did Harakat Hazm in Khan Sibel. This is a serious blow to moderate forces in Syria;
4) Islamic State attacked the Tiyas military airbase west of Palmyra, retook the Sha’er and Juha gas fields northwest of Palmyra, and raided the town of Salamiyeh on a key desert highway linking the Homs to Aleppo — a regime supply line;
5) Kobani was reinforced by KRG Peshmerga to bolster depleted YPG forces;
6) Continued U.S./Coalition airstrikes around Kobani and Deir ez-Zor and in Iraq in the area of Baiji, Fallujah, and ar-Rutbah.

A truce was established between Jabhat al-Nusra, Jabhat Ansar al-Din, Harakat Hazm, Islamic Front and other rebel groups for the mutual defense of Aleppo against SARG. Broad tribal and rebel coalitions are now the trend in the Aleppo area among Sunni groups to meet threats posed by Islamic State and SARG. This continues a trend of military consolidation seen among the tribal resistance in recent months, especially among the She’tat tribe of the Euphrates region in and around Deir ez-Zor, who announced they would fight IS in the Euphrates valley from Raqqa to the Iraqi border. Free Syrian forces lost their last remaining significant strongholds in Idlib Governorate. Their forces are allegedly defecting to extremist groups or are in retreat. Although the full extent of these developments remains to be ascertained, the reduced territory and capacity of free forces will likely adversely impact humanitarian/cultural heritage efforts in northwest Syria just prior to the onset of harsh winter weather.

Islamic State offensives in eastern Homs Governorate in the area of Palmyra and Salamiyeh are interpreted as attempts by IS to bolster its efforts to capture Deir ez-Zor and its important military airbase still controlled by SARG. IS uses raids in the desert to disrupt SARG supply lines to Aleppo and Deir ez-Zor.

Key Heritage Recommendations and Actions
1) DGAM reporting on the Ayn al-Arab mentions the use of landmines on archaeological sites that have been fortified (SHI Incident Report SHI14-070) — this was likely carried out by SARG forces.

*Information on the use of land mines on or near archaeological sites should be carefully documented to aid in future mine removal efforts and for risk management.

2) There is now clear evidence of the looting of sites using metal detectors given the recent APSA report on Tell Hizareen.

² For coverage of weekly events see Kozak, Christopher and Jennifer Cafarella Syria Update October 29–November 04, 2014, 2014 (Institute for the Study of War).
*Monitoring groups should focus on investigating whether there is an upsurge in the marketing of metal artifacts of probable Syrian provenance.

3) Organized looting has occurred at Palmyra in several locations during the use of the site as a SARG military outpost. Palmyrene material, particularly funerary sculpture, is stylistically distinctive. The sculptures stolen from Tomb N5 are well documented, which leads to the hypothesis that the thieves may be operating to acquire antiquities “on order” from middlemen and collectors. These sculptures would not be trafficked to the open market.

*All possible measures should be taken to prevent material from leaving Syria via Turkey, Jordan, Lebanon, and Iraq, to raise public awareness of the plight of Syrian and Iraqi cultural heritage, and to increase the capacity of monitoring efforts aimed at tracking and recovering illicit antiquities.
Incident Reports

SHI14-070

Report Date: November 2, 2014

Site Name: Kobani/Ayn al-Arab District — Tell Badaya, Tell Shuyukh Tahtani, Tell Ahmar, Tell al-Abr, Tell Der Kanhsari, Tell Kamlaq.

Dates of Incident: Various episodes in 2014

Location: Northeastern Aleppo Governorate, various locations

Coordinates: Central Kobani Lat. 36.892671, Lon. 38.355971 — see various SHI reports for individual site locations and details

Site Description: The DGAM report provides a data on the status of various sites in the general Kobani area. Referring to earlier DGAM condition reporting, the report specifies,

During January to June 2014 [a] Large number of Tells were in a good condition including: Tell Ahmar - Tell al Aber-Tell Der Kanshari and Tell al Kamlaq. Both Tell Shuyukh Tahtani and Tell al Bidaya were subject to illegal buildings on the top of the Tells and within the buffer-zone.

Damage to Tell Badaya and Shuyukh Tahtani has been documented by SHI co-director Jesse Casana, and the damage to these tells was detailed in SHI Weekly Report 9. The DGAM report provides an update on current conditions in the area,

Starting on May 2014 the Ayn al-Arab District transferred to battlefield which caused severe damages to the archaeological sites. Tell Shuyukh Tahtani, Tell Shuyukh Fouqani and Tell al Bidaya were subject to diggings by using bulldozers, defenses trenches were opened along the slope at the foot of the tells (depth 3m) destroying the archaeological evidence. The foot of the Tells were fortified by Mines to avoid approaching and climbing.

The DGAM does not attribute the damage to a particular belligerent in the conflict. The use of mines is highly suggestive of SARG forces.

Site Dates: Various.

Source of Destruction: Military installations, looting, combat damage, min fields.

Pattern: The destruction of archaeological mounds in the key theater of operations for all belligerents in the Syrian conflict.

Monitoring Recommendations and Mitigation Measures: This entire region is a high priority monitoring area for SHI. Damage in this area tends to be reported given the proximity of these sites to the Turkish border. The mention of landmines in the DGAM
report is distressing and will doubtless have long-term effects on cultural heritage management in this area. Should the practice of using landmines on archaeological mounds spread — mounds are regularly used for military installations by all belligerents — there will be serious long-term humanitarian consequences akin to the Iraqi Kurdistan Region.

Report Date: November 2, 2014

Site Name: Sufi Shrines in Aleppo Countryside — Maqam Sheikh Aqil, Menbij; shrines in the vicinity of an unspecified church near Qalaat Najm, six Mamluk tombs beside Qalaat Najm; Sufi tombs at Tell A'az, Tell Sarwan, Tell Sheikh Rieh, Tell Dabiq, Tell Akhtarin, and the Tomb of Nebi Daoud in Douwaibeq. Also possibly unspecified tombs in Bab District, Zerba Nahiyah, Hader, Atareb, Tell al-Daman, Maskanah, Al-Khafsa, and Deir Hafr.

Date of Incident: Unspecified

Location: Aleppo Governorate, Menbij area

Coordinates: Undetermined

Site Description: Various Sufi shrines and tombs

Site Date: Medieval to Recent

Source of Destruction: According to a report by the DGAM, 90% of the Sufi Muslim shrines and tombs in the countryside of Aleppo have been destroyed. These include all the shrines in Manbij (on the eastern Aleppo plateau in northern Aleppo), such as Meqam Shiekh Aqil al Manbaji, all the shrines around the Byzantine church located on the road to Najim Castle, and the six Mamluki tombs in front of the castle. Moreover, all the shrines in Ezaz [Azzaz] have also been destroyed, including the Sufi tombs at Tell Ezaz, Tell Sarwan, Tell Shiekh Rieh, Tell Dabiq, Tell Akhtarin, and the Tomb of Nabi Daoud in Dwebek Village. Further reports suggested that the tombs in al Bab district, Zerba nahiyah, Hader, Atareb, Tell al Daman, Maskanah, al Khasfa, and Deir Hafir were completely destroyed. Note that some of these intentional destruction have been previously documented by SHI (See SHI Incident Reports SHI14-002, 022, 030).

Pattern: Likely Islamic State destruction of Sufi shrines and tombs as well as Sunni tombs deemed inappropriate to IS Salafist ideology.

Monitoring Recommendations and Mitigation Measures: As time allows, SHI will disambiguate this data, verify the details and acquire additional information, and attempt to determine exact geographic coordinates of each of these destructions. SHI is currently gathering data on IS intentional destructions of heritage places in Syria and Iraq.

SHI14-072

Report Date: October 29, 2014

Site Name: Tell Hizareen

Date of Incident: Unspecified during 2014 but recent based on vegetation conditions

Location: Idlib Governorate, 2.5 km southwest of modern Kafr Nabl

Coordinates: Lat. 35.597779, Lon. 36.5406744

Site Description: Large tell

Site Date: Early, Middle, and Late Bronze Ages, possible early Iron Age

Source of Destruction: Based on a recent site visit by APSA, the site of Tell Hizareen has been subject to extensive illegal excavations. Numerous looters have been using metal detectors to explore the site, while more than fifty pits have been dug in different parts of the site. Looters have unearthed potsherds and terracotta figurines from multiple time periods.

Pattern: Large-scale looting using metal detectors

Monitoring Recommendations and Mitigation Measures: SHI may request new satellite imagery of the mound as well as neighboring sites. This pattern of looting with metal detectors is reportedly widespread across Syria.

Site Name: Artaban Tomb, Palmyra

Date of Incident: Reported November 1, 2014

Location: Homs Governorate, UNESCO World Heritage Site, Ancient City of Palmyra

Coordinates:

Site Description: DGAM provides the following report on their recent assessment of Tomb N5 at Palmyra,

Antiquities of Palmyra were able to reach the Southeast Necropolis in the Archaeological site and assessed the damage in the underground Artaban Tomb (Tomb n 5) which was discovered on 1985 and restored by the national excavation mission between 1964-1999.

At the beginning of the crises on 2011 the DGAM undertook protective measures against vandalism and theft in the tomb by reinforced its gate and covered the tomb with soil. According to the DGAM team the looters remove the soil, broke into a tomb by took off and expanded the air vent over the gate. The thieves stole 22 funeral bust and child head stone represented in the Scene funerary feast.

Ross Burns provides the following details on the tomb³,

The southeast necropolis area lies south of the main oasis. Most noteworthy is the Tomb of Artaban (second half of the first century AD), discovered in 1957 during construction of an oil pipeline under which you descend to gain entry. The main gallery leads off into four main side ones and is covered by a cradle vault. Fifty six nitches each contained five loculi.

Site Date: First century AD

Source of Destruction: Looting during military occupation by SARG.

Pattern: An emerging pattern of the looting of sites occupied by military forces, particularly sites of the Hellenistic, Roman, and Byzantine periods.

Monitoring Recommendations and Mitigation Measures: Palmyra is already a high priority site for SHI monitoring and evaluation. The antiquities market is being monitored for Pamyrene material, and these efforts will be expanded in coming months.
